

Create a repository

- ➔ GitHub repositories store a variety of projects. In this guide, you'll create a repository and commit your first change.
- ➔ In the upper-right corner of any page, select , then click New repository.

- Type a short, memorable name for your repository. For example, "hello-world".

A screenshot of the GitHub repository creation form. The 'Owner' field is set to 'octocat'. The 'Repository name' field contains 'hello-world' and is highlighted with an orange border, with a green checkmark to its right. Below this, there is a text input field for 'Description (optional)'.

- Optionally, add a description of your repository. For example, "My first repository on GitHub."
- Choose a repository visibility. For more information, see "[About repositories](#)."
- Select Initialize this repository with a README.
- Click Create repository.
